

I claim:

1. A laparoscopic tool comprising:

a hollow elongated body member having a first end and a second end;

a receiving device is secured to said first end for receiving conventional anesthetic medicine;

a sprayer head is secured to said second end for dispensing said medicine; and

said sprayer head includes a plurality of apertures.

2. A laparoscopic tool as in claim 1 wherein said sprayer head is pivotally secured to said second end.

3. A laparoscopic tool as in claim 1 wherein said sprayer head includes a rear wall, side walls and front wall, said rear wall is flat and said side walls extend upwardly from outer edges of said rear wall, and said front wall couples said side walls.

4. A laparoscopic tool as in claim 3 wherein said plurality of apertures extend through said front wall.

5. A laparoscopic tool as in claim 3 wherein said plurality of apertures extends through said front wall and said sidewall.

6. A laparoscopic tool as in claim 1 wherein said second end is open and said second end includes a seat internally located therein, extending upwardly from said seat is a channel for receiving said conventional anesthetic medicine.

7. A laparoscopic tool as in claim 6 wherein said channel includes a pointed tip.

8. A laparoscopic tool as in claim 1 wherein said first end is open and enlarged.

9. A laparoscopic tool as in claim 2 wherein said pivotal attachment occurs via a ball and socket configuration.
